About us

We are an international tech start-up based in Amsterdam, ready to change the shipping industry. We specialize in building web-based platforms and mobile apps that work seamlessly together and are targeted specifically at the shipping market. We take pride in our multi-national team, which brings together people from all parts of the world, with numerous skills. Shipping business and marketing experts, IT developers and professionals from other fields. Curious? Please take a look at our LinkedIn-page <https://www.linkedin.com/company/seaventures-bv/> Come and join the exciting and unique team at Sea Ventures BV and help us change the shipping world.

About you

Your heart is in shipping and you like the innovation power of information technology. You acquired solid experience in shipping and bring thorough understanding of chartering process, preferably 1-3 years of experience in shipping markets such as containers and tankers (chartering liquids, dry bulk) underlined with a background in IT operations. You have an entrepreneurial and creative mindset, focussed on gathering new insights. You are a critical out-of-the-box thinker, analytical and numerical skilled. You have a network of cargo owners, brokers or chartering companies. A degree in shipping (e.g. Institute of Chartered Shipbrokers) and/or Bachelors or Masters in Computer Science, Statistics, Mathematics, Physics or comparable field would be beneficial. Excellent communication skills (verbal and written) in English is a must.

What you will do with us

- Bring subject matter expertise in shipping to our technology developments, focussing on chartering business and communications.
- Serve as product specialist bringing 'voice of the customer' insight that will influence our product roadmap as well assisting in the quality assurance of our platform including internal user testing.
- Develop market intelligence to keep our clients (shipowners, operators and brokers) fully informed in their market segment by defining, implementing and maintaining key shipping reference data.
- The role includes monitoring, analysing, testing, optimising and supporting significant amount of data on shipping performance. From that you're able to see where our product/application can further improve.

- Maintain accurate device listings, trade names, and general profile details for our source base member-companies.
- Perform data proofing of source base profiles for members email data uploads.
- Ensure product databases are secure, have minimal downtime and are tuned for optimal performance and response time.
- Closely liase with our software engineers to support product/application development
- Able to connect business challenges with technical solutions

Our offer

- We offer a competitive compensation and benefits package which includes:
- Annual base salary between Euro 30.000 - 45.000 gross (depending on skills and experience)
- Additional 8% holiday allowance
- Additional personal allowance to cover contribution in commuting, pension contribution or medical insurance (at your own choice)
- Flexible office environment
- A diverse and friendly team with people from all over the world
- Connecting you with a product line network of companies and people from around the globe
- A learning environment where you can extend and build upon your skills and interests, as well as knowledge-sharing
- We offer the ability to work in a cutting-edge field with the best people in the industry
